

Press Release

# Telefónica Tech becomes a technological partner of reference for the Teldat Group with the technological support of Google Cloud

- The company chooses Telefónica Tech's public cloud product, based on Google's proposal, to build a strategic SD-WAN solution for its customers.

**Madrid, 11 March 2022.** [Telefónica Tech](#) will be the Teldat Group's technological partner to accelerate the digital transformation of its customers. The company chooses Telefónica Tech's public cloud product, based on the Google Cloud proposal that it has in its portfolio thanks to the strategic alliance it has with the American company, to develop a differential and strategic SD-WAN solution in the business world.

Telefónica Tech offers the Teldat Group all its professional and managed services capabilities, its expertise and talent enhanced after the acquisition of Altostratus to offer a differential SD-WAN technological solution, robust and with high potential for the business world. Its implementation will allow the Teldat Group to significantly reduce the development and deployment time of the service at the client, carry out monitoring based on artificial intelligence and increase its scalability.

The solution is especially aimed at those customers who want to make a gradual transition from the conventional network to a complete SD-WAN. It features the secure and clean environment of Google Cloud technology and a platform that is easy to manage, accessible and with a great user experience that also allows kubernetes and microservices to be integrated into its structure.

Mario Aguilar, Teldat's Chief Sales Officer, highlights: "It's not a question of Cloud or Edge Computing, it's how to combine both. The alliance between Telefónica Tech and Teldat will lead the future of telecommunications".

Hugo de los Santos, Director of Cloud and Cybersecurity Products and Services at Telefónica Tech, says: "This agreement with the Teldat Group certifies our commitment to accompany companies in their digital transformation with differential services and solutions thanks to our own capabilities and the alliances we have with the main hyperscalers, such as, in this case, Google Cloud".

### **About Teldat**

Founded in 1985, Teldat is a Spanish company whose mission is to provide companies with valuable solutions for cloud access, remote office communications, cybersecurity and voice/data connectivity both in the office and in specific environments, whether industrial, railway, vehicles or public services. Teldat invests heavily in R&D&I, including the most innovative and sophisticated technologies such as network virtualisation, artificial intelligence, Federated Learning, 5G and DLT in the design and development of its solutions. Its ability to work closely with its customers to adapt solutions and products to the specific needs of each project is an added value of the company, which is currently among the European leaders in the corporate communications market. Teldat is based in both Spain and Germany. Website: <http://www.teldat.com/es>
