

## VULNERABILITY RISK MANAGEMENT

# Vulnerability Scanning

## HOW CAN TELEFÓNICA TECH HELP?

Telefónica Tech Vulnerability Scanning goes beyond traditional scanning with risk-based remediation

Due to the changing environment surrounding companies, **today's security teams find it difficult to identify and remediate critical vulnerabilities** that affect organisations' systems and services.

Telefónica Tech's Vulnerability Analysis module **helps to meet this challenge by providing support in the mitigation and prioritisation processes**. Our certified team also adapts and supervises the analysis process, providing detailed information on the relevant vulnerabilities that pose a risk.

The Web Application Scanning module integrates our proprietary Faast technology and a SaaS platform that automatically and continuously (24/7) implements the phases (discovery, analysis and exploitation) that attackers use to compromise the security of companies' web applications.

## WHO IS THIS SERVICE FOR?

Medium-sized organisations that need to comply with industry standards and regulations but want **to reduce the financial burden of personnel recruitment costs and technology purchases**.

Large organisations with an established SecOps capability looking **to outsource heavy workload or 24/7 monitoring** to focus their security teams on strategic, high-value activities.

## OUR VALUE PROPOSITION

### Our service

The Vulnerability Scanning service addresses the challenge of the increasing number of new vulnerabilities emerging every day in network devices, servers and web applications. By continuously monitoring and automatically analysing the security of network infrastructure and web applications to provide a global view of your organisation's

weaknesses, it helps identify vulnerabilities in your assets and enables prioritised management of their remediation. A customer-facing portal and our iSOC complete the value proposition of the service.

### What does it allow you to do?

The service provides a holistic solution that integrates different security products and tools, differentiating itself from traditional security services by offering end-to-end vulnerability management through an Online Portal that allows the tracking of a vulnerability from detection to resolution.

- › Providing **a trusted communication channel** through the role of the local analyst who understands the needs and requirements of the client.
- › Having **a team of experts who review the results gathered** by the tools to determine their severity and **support the client in defining a remediation plan.**

### Benefits

#### Comprehensive and continuously updated coverage

Our scanning technology provides visibility into assets beyond a company's control and implements the latest attack techniques with continuous analysis of IT network infrastructure and web applications.

This reduces exposure time to security breaches and allows companies to know their risk at any time by providing real-time coverage of the entire attack surface.

#### Tracking all your vulnerabilities at a single point

Our Online Portal provides a single point for vulnerability management based on security standards. Our platform includes dashboards with detailed metrics, technical recommendations and remediation projects for effective prioritisation.

#### Time and cost saving

Associated with vulnerability prioritisation and remediation processes.

### Telefónica Tech's differential value

We offer you greater control over your assets by providing you with an inventory of the defined assets plus the assets discovered during the analysis.

Our certified security team has more than 10 years of experience in the use of these technologies, which allows us to take full advantage of them and meet the requirements of digital businesses.

Each vulnerability detected undergoes a rigorous validation process that serves to proactively warn of critical threats that pose a real risk.

## TEAM & ACHIEVEMENTS

### Our team

- › **+1.800** SecOps employees.
- › **+1.500** security certifications.
- › **+50** pentesters worldwide.
- › **+25** global security analysts.

### Achievements

- › **+25K** IP addresses scanned monthly.
- › **+30K** web applications analysed on a monthly basis.

## BUSINESS MODEL

The Vulnerability Scanning service is designed to address your company's exposure to risk on an ongoing basis. This means that **the minimum duration is one year, and it is priced in a simple way depending on the volume of assets to be analysed** (varying its typology based on the modules contracted).

- › Vulnerability Alerts: number of assets.
- › Vulnerability Analysis: number of IP addresses/Hostname.
- › Web Application Scanning: number of FQDNs.

## RELATED PARTNERS

## RELATED SERVICES

### Pentesting & Security Assessment

Discover the vulnerabilities that an attacker could exploit to gain access to your environment and systems.

### Red Team Assessment

Real threats have no time and range restrictions. Red Team allows you to measure your defenses against your enemies.

### Digital Risk Protection

We monitor and protect your company's brand, reputation and business against threats directed against your organisation on the public web as well as on the deep and dark web.
